

5 Relay High Voltage Board for M07H1 Pack (w/ Circ Pump)

Positions of component connections may vary depending on configuration.

This board is wired to a 230VAC source with red and black leads soldered to board as shown. Blue line is soldered as shown, which is neutral for 110VAC to Transformer. 110VAC Transformer supplies 12VAC to Logic Board M07H1 and is protected by 2AMP Fuse assembly connected to board as indicated. The row of terminal screws provide 240VAC to each component as indicated across each pair of screws.
